Windows 7 automated installation kit

You can reduce window installation cost by tackling the window glass installation yourself instead of hiring a contractor to do the job. There are a few steps involved in installing a window, starting with removing the old window, and then preparing the jamb before installing and finishing the new one. Remove the Old Window Pry the window jamb and the window trim off the old window. With these pieces out of the way, remove the screws that hold the window jamb in place, and then lift the old window out of the wall. Handle the old window carefully to keep it from breaking as you put it aside. If there are multiple sashes, it can be easiest to remove them one at a time, according to DIY Network. Prepare the Opening for the New Window Carefully inspect the opening, looking for rotting boards inside the jamb and on the exterior of the window. Anything that's in bad condition needs to be replaced to save you from needing to do a repeat window installation job in the near future. Measure to make sure your new window will fit in the opening properly. The rough opening needs to be between 1/4-inch and 3/8-inch bigger than the outer edge of the new window, according to DIY Network. Dry Fit and Install the Window Slide the new window into the opening to make sure it fits properly. It should be snug but not so tight it's hard to move. This is called dry fitting or test fitting the window. If the window doesn't sit properly in the jamb, use shims to even it up, according to Home Depot. When you're happy with the fit, apply silicone caulking around the outer edge of the new window. Slide it back into place, make sure the shims are seated properly, and then use the screws that came with the window to attach it to the jamb. Fill Gaps and Reapply Window Trim If there are gaps around the window, push insulation into the open spaces, or use caulk to seal gaps. Expanding spray foam may also work for larger gaps, according to DIY Network. If there's a gap between the new window and drywall, add a jamb extension to fill it. Use finish nails to reattach the trim, or use new trim if you prefer. Apply Finishing Touches For the last part of your window well installation project, cover nail holes in the window trim with wood putty, as suggested by DIY Network. Make sure the putty is smooth, and then let it dry. If there's any noticeable roughness after the putty dries, you can use fine-grit sandpaper to smooth it down, and then paint over it to finish the surface. MORE FROM QUESTIONS ANSWERED.NET Windows 7 / Getting Started The Windows Automated Installation Kit (WAIK) is a group of tools you can use on the technician's computer to help with the deployment of Windows 7. These tools include the following: Deployment Tools Command Prompt: You can use this prompt to run commands such as `dism`, `oscdimg`, and `imagex`. When you launch it, the prompt temporarily modifies the path to include the path to these tools and starts in the `C:\Program Files\Windows AIK\Tools\PETools` folder. Windows System Image Manager: You can use this tool to create answer files. This tool is explored in the section "Using Windows System Image Manager" later in this article. Documentation Folder: The Documentation folder includes access to several links. It includes a link to an HTML file that includes step-by-step instructions, links to three separate help files, and an additional folder named SDK (Software Deployment Kit) for software developers. VAMT 1.2 Folder: This folder includes Volume Activation Management Tool (VAMT) version 1.2 help files and tools, which you can use for managing activation. You can also download VAMT version 2.0 as a separate download. You can use these tools to capture or deploy an image, and perform offline maintenance of images. Offline maintenance means that you aren't booted into the operating system; instead, you are modifying the contents of the WIM file. You can use the WAIK tools to expand the contents of a WIM file into files and folders on the technician's computer. You can modify the files and folders as desired, and then restore them into the image. The WAIK is available as a free download from Microsoft. You can get it by going to Microsoft's download site (www.microsoft.com/downloads/) and entering WAIK in the Search All Download Center text box. The Windows AIK for Windows 7 download (KB3AIK_EN.iso) file should be listed on the first page. It's about 1.7 GB in size so will take a little time to download even with a high-bandwidth connection. After you download the ISO image, you can burn it to a DVD using Windows 7's built-in feature. Simply place a writable DVD into your DVD burner, right-click the ISO file, and select Burn Disc Image. Once you have the DVD, you can use the following steps to install it: Place the DVD into your DVD drive. If Autoplay doesn't start automatically, use Windows Explorer to browse to the drive and double-click StartCD.exe. If prompted by User Account Control (UAC), click Yes to continue. You'll see a screen. Click Windows AIK Setup. When the welcome page appears, click Next. Review the license terms and select I Agree. Click Next. Accept the default installation folder of `C:\Program Files\Windows AIK` and click Next. On the Confirm Installation page, click Next to start the installation. When installation completes, click Close. Click Start → All Programs → Microsoft Windows AIK. You'll see all the WAIK tools within this Start menu folder. [Previous] [Contents] [Next] Loop YouTube videos without using any third party software Display default desktop icons on Windows 10 Access is denied when you delete or move an OU to Active Directory Display confirmation dialog when deleting files in Windows Server 2016 How to remove an email from Outlook's Autocomplete list Remove hyperlinks from Excel sheets Delete multiple blank rows and columns in Excel Create, restore and manage snapshots on VMware Workstation Add hard disk to Windows VM on VMware Workstation The Windows Automated Installation Kit (Windows AIK) is a set of tools and documentation that support the configuration and deployment of Microsoft® Windows® operating systems. By using Windows AIK, you can automate Windows installations, capture Windows images with ImageX, configure and modify images using Deployment Imaging Servicing and Management (DISM), create Windows PE images, and migrate user profiles and data with the User State Migration Tool (USMT). Download Read More The Windows 7 Automated Installation Kit (WAIK) enables the creation of a bootable WinPE disc. Download WAIK from Microsoft's web site. Install it on any supported Windows system having a CD/DVD ROM burner installed. This system becomes the Technician PC and writes the PE image onto the CD. After installing WAIK, read Microsoft's "Getting Started Guide" for WAIK, as well as any README file(s) that accompanied WAIK for information about system requirements, known issues, and so on. Page 2 These topics describe how to create a bootable WinPE CD with WAIK. Prerequisites for Creating the WinPE RAM CD The prerequisites for creating the WinPE RAM CD are as follows: WAIK, Windows Automated Installation Kit for Windows 7. See Download the Windows 7 Automated Installation Kit. CDBurn or DVDBurn (or other compatible burning utility), which allows burning a DVD from an ISO image. Technician PC, which is a Windows compatible workstation or PC with a CD/DVD ROM Drive (RW capable) with Windows AIK installed on it. A blank CD or DVD, which is used to create the bootable WinPE RAM CD. The `loaddrivers.bat` file, which must be downloaded from the Xsigo FTP site. You will need a valid user name and password to access the file. Page 3 Type the following command from the WinPE tools command prompt: `copyype.cmd x86 c:\winpe_x86` Open the Windows AIK command prompt. Change the directory to `c:\winpe_x86\iso\sources`. Copy `winpe.win` to `boot.wim`. `copy C:\Program Files\Windows AIK\Tools\PETools\x86\winpe.win c:\winpe_x86\iso\sources\boot.wim` Create the mount directory. `md c:\winpe_x86\iso\sources\mount` Mount and edit the `boot.wim` file. `dism /mount-wim /wimfile:c:\winpe_x86\iso\sources\boot.wim /index:1 /mountdir:mount` Copy the utilities needed to perform the required tasks in WinPE. For `imagex.exe`: `copy C:\Program Files\Windows AIK\Tools\x86\imagex.exe c:\winpe_x86\iso\sources\mount\windows` copy `C:\Program Files\Windows AIK\Tools\petools\x86\bootsect.exe c:\winpe_x86\iso\sources\mount\windows` You use `imagex.exe` as a tool when the server is booted into WinPE. You use `dism.exe` to build the PE disc. Log in to the Oracle FTP site, and download the `loaddrivers.bat` file to the following directory on the local server. `C:\winpe_x86\iso\sources\mount` Copy the device diagnostic tool to the mounted image. `copy c:\xsigos-3.0.0-whql\xsigo\xginstdev32.exe c:\winpe_x86\iso\sources\mount` Create a temporary folder to save the WinPE driver package for your environment. For example, a `PEdrivers` folder. `md c:\winpe_x86\iso\sources\mount\PEdrivers` Copy the WinPE driver package appropriate for your environment into the root of the mounted image. `copy c:\xsigos-3.0.0-whql\xsigo\pedrivers\an-install\x86*. * c:\winpe_x86\iso\sources\mount\PEdrivers\` (Optional) You can add scripting capability, which allows scripts to be executed in the WinPE environment. If you are adding scripting capability to the WinPE disc, do so before burning the WinPE image onto the physical medium (CD or DVD). See Add Scripting Capability to the WinPE CD. Unmount the mounted WIM image. `dism /unmount-wim /mountdir:c:\winpe_x86\iso\sources\mount /commit` Create the ISO image for the bootable disc. `oscdimg -n -b:c:\winpe_x86\ets\boot.com c:\winpe_x86\iso c:\winpe_x86\winpe_x86.iso` Burn the ISO file to a DVD or CD-ROM: DVD `dvdburn d: c:\winpe_x86\winpe_x86.iso` CD-ROM `cdburn d: c:\winpe_x86\winpe_x86.iso` Boot into WinPE and execute the Oracle-provided `loaddrivers.bat` file from the root of X:. When the server is booted into the WinPE image, the root of x: should contain the following: `Xginstdev32.exe` `loaddrivers.exe` PE drivers folder containing the Xsigo WinPE host drivers
